This sequence has been validated by Multiple Complete Digest
Mapping. Comparison of the experimentally derived map digest
Happing at the sequence predicted fragments is given below
Small fragments below a variable cutoff (approximately 400-600bp)
are not mapped and hence do not appear in the table. There are no
significant remaining discrepancies between the experimental and
predicted values. Uniquely ordered fragment groups are separated
by dashed lines.
                                                                                                                                      Large scale sequence analysis of the human WHC class I region pubblished (1998)

f) is entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
quality! levals above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
Genbank flat file format but are available as part
of this entry's ASN.1 file.

Submitted (109-2NN-1999) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis Mo 53108, USA.

On Mar 13, 1999 this sequence version replaced 91:4138779.

* NOTE: This is a 'working draft' sequence. It currently consists of 9 contigns. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigns are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will

No Submitted (21-COT-1999) Production Sequencing Facility, DOE Joint Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA www.jg.i.doe.gov.

* WOTE: This is a "working draft, sequence. It currently consists of 40 contigs. The true order of the pieces is no frown and their order in this sequence record is a thin story agas between the contigs are represented as a round of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as as soon as it is available and the accession number will

* be preserved.

on Mar 21, 1999 this sequence version replaced g1:3980345.

During sequence assembly data is compared from overlapping clones
where differences are found these are annotated as variations.
Where differences are found these are annotated as variations corresponding to the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
IMPORTANT: This sequence is not the entire insert of clone 198021.
If may be shorter because we arrange for a small overlap between
neighbouring submissions.
The true right end of clone d335887 is at i00 in this sequence.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e-g. Alu). Where the
sequence was generated from part of bacterial clone contigs of
human chromosome X, constructed by the Sanger Centre Chromosome X
http://www.sanger.ac.uk/GBV/ChrX
198021 is from the library RPCI6 constructed at the Roswell Park
Cancer Institute by the group of Pieter de Jong. For further
details see http://Acapac.med.buffaio.edu/ vECTOR: pPAC4.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ŏ                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Clone RG31510 is from a release of the human BAC library CTTB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1995). The clone is available from VECTOR: pBeloBAC11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
ACO05090 116218 bp DNA PRI 27-AUG-1998
Homo sapiens BAC clone RG315L10 from 7p14-p15, complete sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
quality, levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
Genbank flat file format but are available as part
of this entry's ASN.1 file.

This sequence has been validated by Multiple Complete Digest
Mapping. Comparison of the experimentally derived map digest
fragments with sequence-predicted fragments is given below.

Litter Submitted (02-APR-1998) Chromosome 6 Project Group (http://wwwsanger.ac.uk/RGP/Chr6/) Sanger Centre, Hinxton, Cambridgeshire, CB10 18A, UK. E-mail enquires:

Cambridgeshire, ac.uk/GD/Chr6/) Sanger Centre, Hinxton, Cambridgeshire, ac.uk Clone requests: clonerequest(Sanger.ac.uk Clone ac.uk Clone is the entire insert of clone 179N16.

IMPORTANT: This sequence is the entire insert of clone 179N16.

IMPORTANT: This sequence is the compared from overlapping clone invariations where differences are found these are annotated as variations coperated may not be found in the sequence submits sequence submits only a small overlap as described above.

This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed in collaboration by the Sanger clettre chromosome 6, constructed in collaboration by the Sanger information can be found at http://www.sanger.ac.uk/RGP/Chr6/ This sequence has been finished according to sequence map criteria as follows. An attential and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is amontated human repeat sequence elements (e.g. Alu). Where the man annotation using the 'unsure' man annotation using the 'unsure' man annotation and annotation whose mander and annotation whose mander and annotation whose mander and annotation using the 'unsure' mander and annotation using the 'man annotation whose mander and annotation whose mander and annotation whose mander and annotation where the mander and annotation using the 'mander and annotation whose mander and annotation whose mander and annotation where the mander and annotation where the mander and annotation whose mander and annotation where the mander and annotation where the mander and annotation when the whose mander and annotation when the mander and annotation when the ma
                                                    HS179N16 172048 bp DNA HOMO Sapient 23-NOV-1999 Homo sapiens DNA sequence from PAC 179N16 on chromosome 6p21.1-21.33. Contains the SAPK4 (NAPK p386atle) gene, and the alternatively spliced SAPK4 ene coding for CSaids binding protein CSBP2 and a MAPK p38beta LIKE protein. Contains ESTS, STSs and two predicted CPG islands, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The true left end of clone 179N16 is at 1 in this sequence. The true right end of clone 524E15 is at 690.

The true left end of clone 179N16 is at 172048.

The true left end of clone 179N16 is at 172048.

TOWNE is from the library RPCII constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.

Taylog6-x003048 and x22301-x22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-1ra. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human II-Ira BAC contiguous DNA sequence 96.

074052 is interleukin-1-beta cDNA and 074019-21 are primers used for the amplification of this cDNA. They are used specifically for the detection and isolation of this sequence. The primers have the advantage of high sensitivity and reliability and are useful in the

member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (II-1R). It may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukemia, rheumatiod atthifts, psoriasis and inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity of IL-1 or its receptor complex. 3810 A; 3245 C; 3299 G; 4327 T;

PRA vector for gene therapy for reduction of re-stenosis following coronary artery catheterisation

PRA sequence represents the coding sequence for the smooth muscle myosin heavy chain SMI isoform protein. This SMI coding sequence was isolated from a mouse embryo cohra library using probes based on the rabbit smooth crows myosin heavy chain SMI isoform. This sequence is included in the gene therapy vector of the invention. The vector of the invention associated adenovirus or animal-expression plasmid vector (such as pCXN2 corsists of this sequence inserted into a retrovirus, adenovirus; and male associated adenovirus or animal-expression plasmid vector (such as pCXN2 corp. PAGE208). The vector can be used in the gene therapy treatment of allowing coronary artery catheterisation for widening of sclerotic
                                                      25-MR-1997 (first entry)

Claim 8: Page 59-64; 71pp: English.

IBF and IBF CDNA are useful in studies on the immune system.

Treatment for IgF-mediated diseases may be possible. IBF may enhance breat differentiation into an immunoglobulin-secreting cell.

(TBP) associated factor (TAF) designated TAFII250. The protein is a polymerate of the FTID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol. wt. of 250 kD by SDS-PAGE. A fragment (1H1), derived an estimated mol. wt. of 250 kD by SDS-PAGE. A fragment (1H1), derived from a Lanbda-grill HeLa S3 cDNA expression library screened with serum isolate the TAFII250 gene from a directional cONA library (in a manda-trill derived from HeLa cell poly(A+) RNA. The screen isolated but lacked about 1.15 kD of 53 kD which contained an extended 3 untranslated region but lacked about 1.15 kD of 5 sequence. The 5 sequence was isolated when the translated region when the translated region when the screen isolated when the translated region when the translated reg
                                                                                                                                                                                                                                                                                                                    Dy You wainly praints 19422-0.

The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition to several nuclear fractions designated TFIIA, B, D, E, F, H, I and J to RNA polymerase II holoenzyme. Fraction TFIID has been shown to contains a TBP and other TRFs. Purification of TFIID has been shown to sent and the components reveals 7 proteins ranging in size from 30-250 kD. Serum raised against the TFIID fraction allowed cloning of the corresp.

them, are used to modulate transcription, including transcription initiation. TARS are nuclear proteins involved in RNA polymerase I, II and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA. 1403 T; Sequence 5962 BP; I764 A; TAF, an activator, or DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a murine mitochondrial uncoupling protein designated mUCP3a. The protein is involved in metabolic requiation. The specification describes different isoforms of this protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Claim 6: Page 130-131: 221pp: English.

CCARECROW (SCR) SRPal2 gene, identified by homology to the rabidopsis SCR gene (see T95753). It encodes a 808-amino acid polypeptide (see W38188). SCR is expressed specifically in embryo cop progenitor tissue and in certain root and stem tissues. It root progenitor tissue and in certain root and stem tissues. It regulates a specific asymmetric division, and controls gravitropic response in earlial structures and root formation. Nucleic acid molecules (see T95753-66) encoding SCR protein sequences (see CRS753-66) encoding SCR proteins acquences (see CRS753-66) encoding SCR proteins is confered to overexpress SCR, so that call division is conceased in roots. resulting in thicker root development, while a cusceptible to lodging. Plants that contain an antisense control of a SCR promoter and expressed in a plant to prace dunder control of a SCR promoter and expressed in a plant to confer herbicide, salt, pathogen or insect resistance, or when concern herbicide, salt, pathogen or insect resistance, or when solds a salt, pathogen or insect resistance, or when solds a salt, pathogen or insect resistance, or when solds a salt, pathogen or insect resistance, or when solds and salt and salts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2301 GATÍCTGCATCATCCTTCTCAAGCGGAAGCTGTCTAAATCCGGCTCGGATCAGTCTCG 2242

Human gene P2XM whose transcription is induced by p53 - useful, e.g.

Human gene P2XM whose transcription is induced by p53 - useful, e.g.

for diagnostic purposes and in development of new anticancer drugs

Claim 2: Rage 22-23; 43pp; Japanese.

Claim 2: Rage 22-23; 43pp; Japanese.

Claim 2: Rage 22-23; 43pp; Japanese.

This sequence represents the coding sequence for the P2XM protein of the receptors, and (ii) RP-2 protein which is expressed in thymocytes of APP receptors, and (ii) RP-2 protein which is expressed in thymocytes of APP receptors, and (ii) RP-2 protein which is expressed in thymocytes of APP receptors, and (ii) RP-2 protein which is expressed in thymocytes of APP receptors, and (ii) RP-2 protein which is specifically required by the tumour-suppressor gene p53. The P2XM gene is specifically required by the tumour-suppressor gene p53. The P2XM gene is specifically expressed in skeletal muscle and sequence losses frequently occur in rhabdoid sarcomas. The genes may be used for diagnostic purposes (e.g. by detecting changes occurring in the gene in sarcomas), using probes and primers containing to the development of new anticoncer drugs.

C in the development of new anticoncer drugs.

This sequence represents dentatorubral-pallidoluysian atrophy (DRPLA) cDNA (nucleotides 238-2090 of Genbank accession number D38529). The invention relates to a new screening assay for compounds capable of inhibiting binding of glyceraldehyde-3-Phosphate dehydrogenase (GAPDH) to polyglutamine. The assay comprises providing an aqueous solution containing a test compound, polyglutamine-containing molecules and GAPDI molecules is reduced in the presence of the test compound. Inhibitors identified by the above assay could be used to treat neurodegenerative diseases or psychiatric disorders caused by a gene containing an extended CAG domain, e.g. Huntington's disease or schizophrenia. sequence 1853 BP; 347 A; 774 C; 388 G; 344 T;

/note="vector: pT73D-Pac (Pharmacia) with a modified
polylanker; Site_i: Not I; Site_2: Eco RI; lst strand cDNA
was prepared from 12 pooled bulk tumor samples and primed
with a Not I - oligo(dT) primer. Double-stranded cDNA
vas prepared to Eco RI adaptors (Pharmacia), digested with Not
I snd cloned into the Not I snd Eco RI sites of the
modified pT773 vector. Library went through one round of
normalization:
